

# Machine Learning Using Python Frameworks

LORCAN WILLIAMSON

# Introduction

- ▶ Machine learning has advanced in recent years due to increases in computer capabilities
- ▶ This project's aim is to look at the landscape of machine learning using python frameworks.
- ▶ This presentation will show my plans for this project.

# Project plan

3

- ▶ This project will explore the frameworks by solving 3 example problems of different types.
  - ▶ Image detection
  - ▶ Classification
  - ▶ Regression
- ▶ These examples will cover a number of features of these frameworks, such as data pre-processing and various machine learning algorithms.

# Detecting Pneumonia

- ▶ Pneumonia is disease that causes an inflammation of the lungs.
- ▶ It is responsible for around 5% of deaths in Ireland annually.
- ▶ Machine learning has been used to achieve diagnosis rates comparable to doctors for diseases such as pneumonia.
- ▶ This problem should allow for demonstration of CNNs, class balancing, and different accuracy metrics.

Normal

Pneumonia

# Predicting Student Performance

5

- ▶ This example problem looks to predict student test scores based on a number of factors, such as;
  - ▶ Parents occupation
  - ▶ Family size
  - ▶ Social life.
- ▶ This problem was chosen as it should offer a good example of data reduction and augmentation techniques, and many common machine learning algorithms are applicable

# Forecasting Bitcoin Prices.

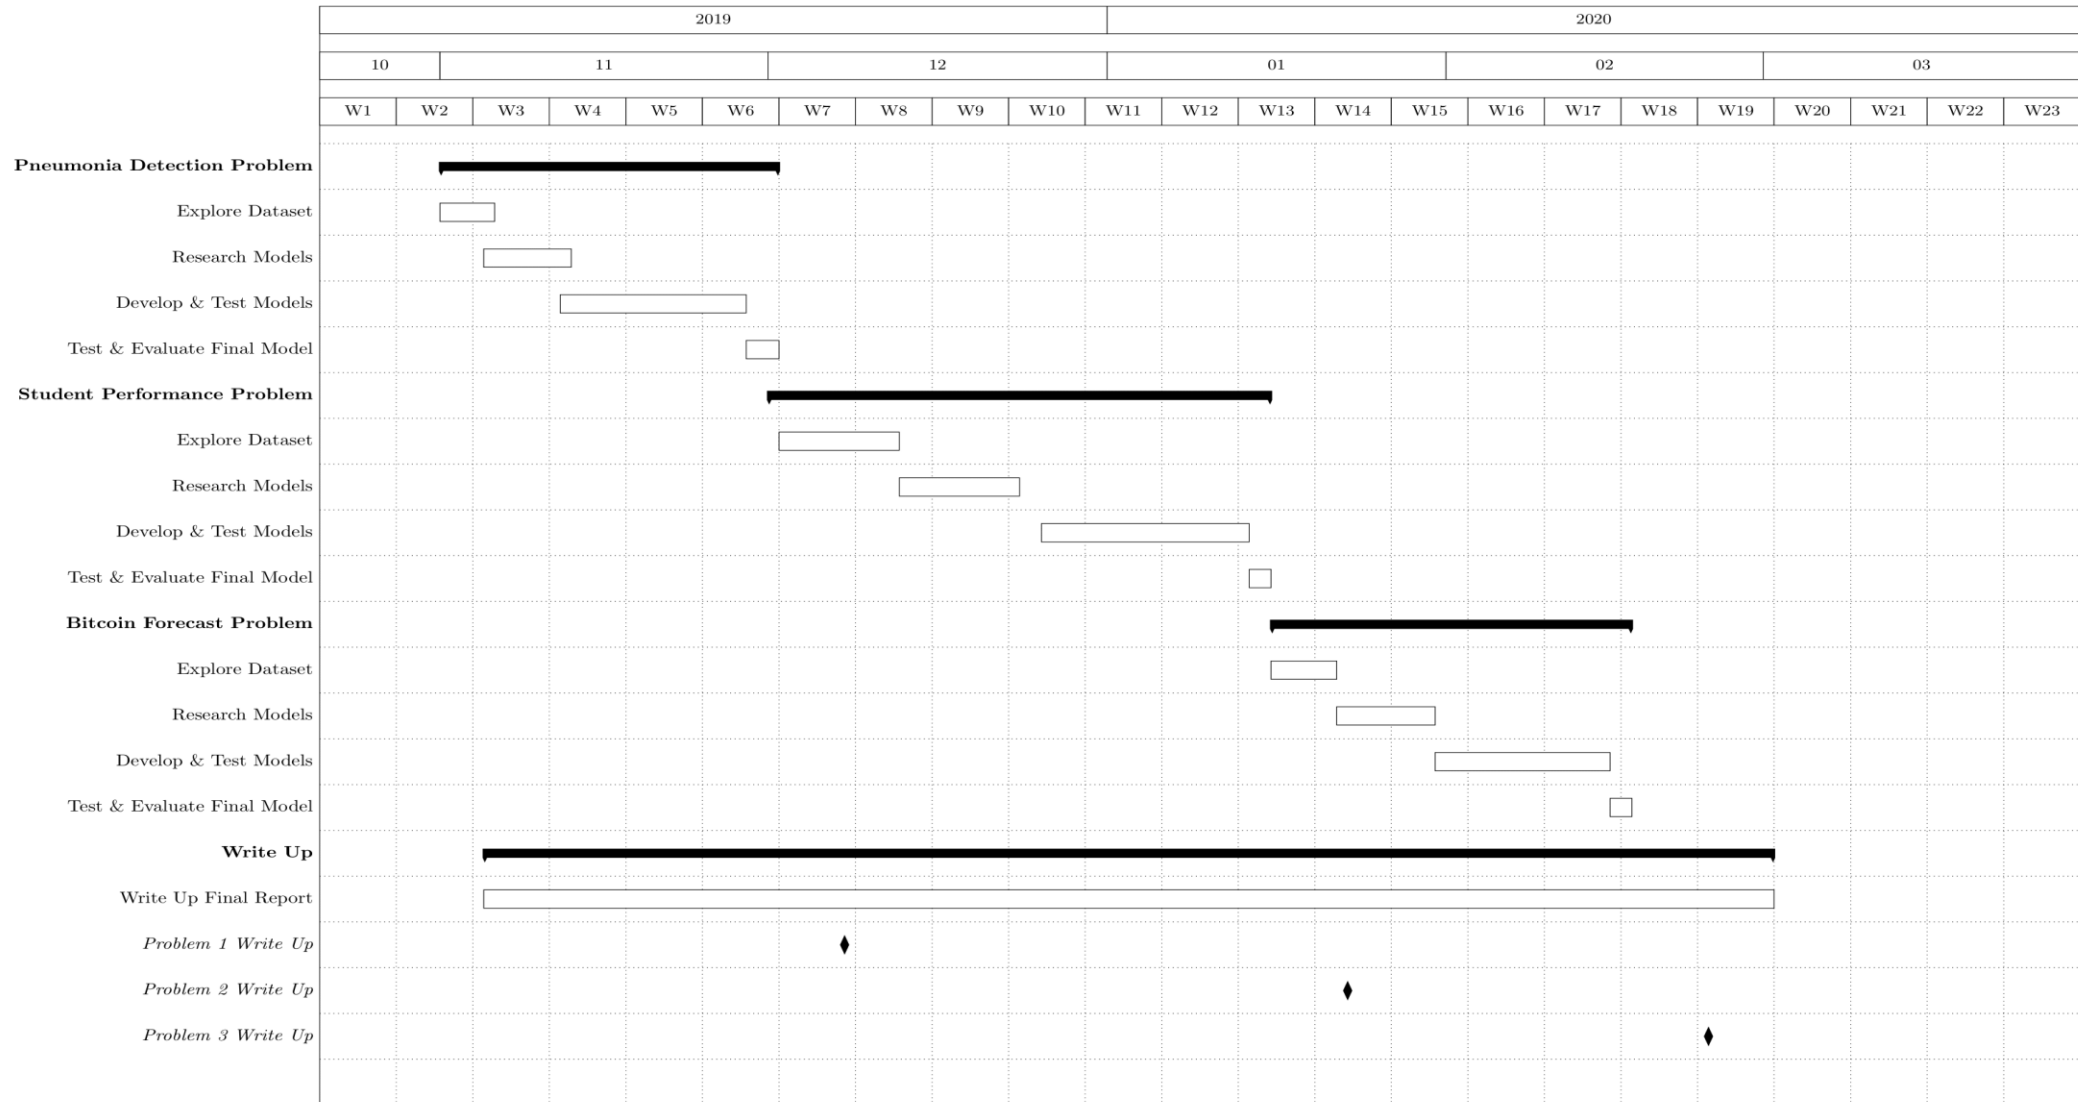

- ▶ Machine learning is often used by stock brokers and investors.
- ▶ It can be used to forecast prices or automatically trade stocks.
- ▶ This problem was chosen to demonstrate regression, and forecasting using time-series data.

# Action Plan

7

- ▶ Each problem has been split into 4 steps;
  - ▶ Exploring the dataset (5 days)
  - ▶ Researching related problems (7 days)
  - ▶ Developing code (14 days)
  - ▶ Testing final model (2 days)

# Conclusion

- ▶ This project shall be looking at common machine learning frameworks in Python.
- ▶ It will do this through by developing code for example problems.
- ▶ These problems being;
  - ▶ Detecting pneumonia
  - ▶ Predicting student performance
  - ▶ Forecasting bitcoin prices
